About Me

I'm a Computer Science student at the Higher Institute of Applied Science and Technologies of Sousse (ISSATSO), specializing in cybersecurity and network technologies. I actively participate in Capture The Flag (CTF) competitions and have hands-on experience in reverse engineering, cryptography, and digital forensics. I am passionate about penetration testing and malware analysis.

Education

Higher Institute of Applied Science and Technology of Sousse (ISSATSO)

2024 – Present

Bachelor of Computer Science

Sousse, Tunisia

National Institute of Applied Science and Technology

2023 – 2024

Cycle Préparatoire Intégré

Tunisia

Experience

Pwn & Patch

Summer 2025

Backend Developer Intern (Ruby on Rails)

On-site

- Developed and maintained backend systems for cybersecurity products using Ruby on Rails.
- Designed and optimized APIs and database queries for performance and scalability.
- Collaborated with the engineering team on system architecture and integrations.
- Contributed to improving security, performance, and overall platform reliability.

CyberTrace Sessions

2024 – Present

Cybersecurity Tutor

Sousse, Tunisia

- Provided tutoring in cybersecurity with a focus on OSCP-style penetration testing.
- Conducted training sessions on LFI/RFI, SQL injection, and buffer overflow techniques.

CTF Competitions (Team: Phr34k\$)

2023 – Present

CTF Player & Challenge Author

Hybrid

- Participated and won in multiple CTF competitions and always building my skills with training sites like Hack The Box, TryHackMe, and Root-Me...
- Authored CTF challenges and published write-ups since 2023.

Projects

BlackArch Tools Manager | GitHub

2025

- Developed a GUI-like terminal tool to manage and interact with BlackArch Linux tools more efficiently.
- Implemented category-based navigation, fuzzy search, and favorites system for quick access to tools.
- Integrated features to install, uninstall, and execute tools directly from the interface.
- Designed for compatibility with Arch-based environments using BlackArch repositories.

Malware Analysis

2024 – Present

- Developing malware samples to study detection evasion and reverse engineering techniques.
- Practicing threat analysis in controlled lab environments.

Technical Skills

Languages: C, C++, Python, Bash, SQL

Cybersecurity: Penetration Testing, Reverse Engineering, Cryptography, Digital Forensics

Platforms: Linux, Hack The Box, TryHackMe, Root-Me

Networking: CCNA 1 Certified, Network Fundamentals
